

**TCT CIRCUIT SUPPLY  
.009 Accusheet Material Specification sheet**

**Length & Width Tolerance:** +/- .0625"

**Squareness Tolerance:** The difference in diagonal measurements not to exceed .125"

**Lateral Bow Tolerance:** Maximum allowable deviation of a side edge from a straight line is .0625"

**Flatness Tolerance (Coil Set):** A sheet will be considered flat when all edges touch a flat horizontal surface when laid convex side up to minimize deviation ( except Edgewave and Centerbuckle)

**Flatness Tolerance (Edgewave & Centerbuckle):** 5 – i units maximum allowable deviation with the sheet positioned on a flat horizontal surface to minimize deviation.

**Surface Tolerance:** Any interruption in the surface that would cause a drill to deviate from its projected course is cause for rejection. This includes but is not limited to dings, dents, scratches, holes, kinks and laminations.

**Packaging:** 2,000 blanks maximum per skid with cardboard separating every 50 pieces. The skids will be built oversize and corner guards and shrink-wrap will be used for additional protection. Cardboard will be placed on top with bending used to secure everything to the skid, using care to protect material from any damage.
